

SubRig

PRE-ENGINEERED SEWAGE AND SUMP STATIONS

Designed for superior reliability and efficient installation, the SubRig addresses the challenges of removing waste from buildings. Guaranteed clog-free operation, and manufactured from the highest grade components, SubRig protects buildings from waste pit odors and flooding, with minimal maintenance and service.

Construction

Standards include seamless galvanized or stainless steel piping, full port valves, true-wyes, and non-corroding aluminum frames and covers

Industrial-Grade Controls

UL508 control panel and Municipal grade sensors for reliable operation and monitoring

Electrical Connections

Patented and environmentally sealed to prevent the intrusion of corrosive sewer gases and humidity to the control panel.

Assembly

Patented design assures simple and accurate assembly with minimal labor requirements. Fully factory pre-engineered, for assembly with only basic tools in 15% the time of conventional construction.

Municipal Pumps

The heart of the system. Clog-free submersible pumps with run-dry capabilities with pit mixing accessories to prevent build-up on the pit walls. Pits are kept clean, eliminating chemical treatment

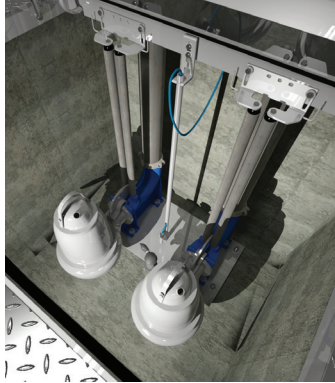

SubRig

PRE-ENGINEERED SEWAGE AND SUMP STATIONS

Reliability Where No One Wants Failure

Sewage pits, often forgotten, are the one place in every building where no one wants to go. Failure may be the result of equipment or installation issues, or clogging from debris, but in any case the results range from foul odor to flooding. Having serviced this market for over 60 years, our SubRig systems evolved from coupling tried-and-true best practices with creative engineering.

Engineered, So You Don't Have To

Every component in the SubRig is selected, designed, and manufactured for its specific purpose. Combined, the patented design eliminates all guesswork when estimating and installing waste pit systems.

Installation, Fast and Perfect

Hundreds of SubRig installations attest to the value. Using the most simple tools, what once took nine days to build can now be delivered and installed in a single day, and with far better results.

Value, We Understand Your Business

Reducing labor time, cost, and craftwork, we have put that money to use by supplying high quality components and innovative design. For the same total installed cost, better equipment is provided. Better equipment, better design, and reliable installation all result in a happy customer.

Clog Free Performance

Proof of success is found in the elimination of callbacks for odor, clogs, and equipment failure. A low grade pump system has no place in a high-rise or Institutional application. We use only Municipal grade pumps for the most robust, clog-free operation.

Flexible Controls

Deep understanding of sewage pump and control systems results in a standard family of products that apply to a wide range of building types and sizes. With multiple levels of equipment and control redundancy, we are confident that SubRig will address every concern surrounding this very demanding application.

Represented by:

G.A. Fleet Associates

GA Fleet delivers the efficiency of a single source provider, the experience gained from 60 years of big project work, the financial stability of an industry leader, the best job-site practice, and the expertise needed to insure a cost-effective approach to each project. GA Fleet specializes in plumbing and fire protection pumping systems, municipal water and waste pumping systems, HVAC systems, and specialty electrical and control systems.

Fleet Pump & Service Group

Fleet Pump & Service Group provides ongoing service and support for the "in-place" equipment market. Our expert mechanics and technicians can repair equipment at your facility or in our brand new 35,000 sq. ft. complex. We also offer pre-packaged and custom-configured solutions designed to meet your specific needs.
